- Detects forged notes which are printed on normal, starch-based paper.
- Genuine note = ink vanishes completely or leaves a clear mark.
- A potential forged note = the ink will turn into a brown to grey colour.
- The mark will disappear on a non-starch-based paper.
- For added security, a banknote testing device should also be used.

- Impressive metallic effects with an exceptionally high gloss level are possible thanks to a new pigment technology in which the colour pigments coat so-called aluminium flakes. This then results in powerful, unique and reflective colour nuances on the most wide variety of surfaces.
- The markers are suitable for many smooth, non-absorbent surfaces, which can be light or dark. They can be used on glass, metal, plastic, porcelain, stone and paper.
- On all of them a clean and homogeneous ink application is possible due to a valve control.
- The ink dries quickly and avoids annoying smudging on fine lines or surfaces. The opacity is high, but the ink does not bleed through on paper.

- A sustainable and ergonomic Twin Marker can be individually equipped with two different colour cartridges and/or two different tip options.
- A total of thirty colours, a blender and a brush tip or a fine round tip can be selected.
- The brush tip is ideal for large-scale and homogeneous colouring, the fine round tip for exact detail work and sharp lines.
- The modern triangular design thus offers many combination options for individual work. The marker consists of a pen body into which a cartridge can be screwed in and out from both sides.
- The colours are miscible and very brilliant. The grip surface of the marker is pleasantly matt, and the top of the cap is marked with the tip, line and colour code.
- A complete set in a cardboard box with one complete marker, ten empty marker bodies and cartridges per tip and colour (72 parts), and two smaller sets (52 and 27 parts).
